 Developing an Integrated Model for Mobile Learning Usability Evaluation -case of E-books Apr 05 2020 Mobile computing, as prognosticated in the ubiquitous computing vision, is increasingly becoming a predominant aspect of contemporary computing in organisations and society. The penetration of mobile phones in sub-Sahara Africa has occurred with amazing rapidity: for many young people, they now represent a very significant element of their daily lives. Africa has a booming global cell phone penetration, at 67.5%, the fastest growing mobile market in the world. Adoption of these emerging technologies for socio-economic development may contribute to the betterment of people's lives. Mobile learning has the potential to transform higher education through the adoption of mobile devices which support ubiquitous learning. The purpose of this current study is to develop an Integrated Framework Model (IFM) for mobile learning usability (MLU) evaluation of e-books through the integration of the Technology Acceptance Model and Task Technology Fit theory. The Technology Acceptance Model is widely used in studies relating to technology acceptance. The Task-Technology Fit theory has been used in Information Systems together with usability as a measure of performance. Two additional constructs, namely, Social Influence and Perceived Enjoyment were adopted from the Unified Theory of Acceptance and Use of Technology model and from Motivational Models. Integrating the Technology Acceptance Model and Task-Technology Fit theory provides a model that includes the individual characteristics (Technology Acceptance Model) and the technology and task characteristics (Task Technology Fit). A quantitative research design was primarily employed. A pilot study was administered as a guide for the main study questionnaire. The questionnaire was based on the constructs in the IFM. The pilot study consisted of participants registered for a module, called Computer Security, at the Central University of Technology. The main study participants were students registered for Oracle and CCNA short courses. The results of the study reveal that individual characteristics, task characteristics and technology characteristics positively influence the usability of e-books in higher education. Usability positively influences adoption, which in turn influences performance among students in higher education.

 Practical Spreadsheet Risk Modeling for Management Sep 30 2019 Risk analytics is developing rapidly, and analysts in the field need material that is theoretically sound as well as practical and straightforward. A one-stop resource for quantitative risk analysis, Practical Spreadsheet Risk Modeling for Management dispenses with the use of complex mathematics, concentrating on how powerful techniques and methods can be used correctly within a spreadsheet-based environment. Highlights Covers important topics for modern risk analysis, such as frequency-severity modeling and modeling of expert opinion Keeps mathematics to a minimum while covering fairly advanced topics through the use of powerful software tools Contains an unusually diverse selection of topics, including explicit treatment of frequency-severity modeling, copulas, parameter and model uncertainty, volatility modeling in time series, Markov chains, Bayesian modeling, stochastic dominance, and extended treatment of modeling expert opinion End-of-chapter exercises span eight application areas illustrating the broad application of risk analysis tools with the use of data from real-world examples and case studies This book is written for anyone interested in conducting applied risk analysis in business, engineering, environmental planning, public policy, medicine, or virtually any field amenable to spreadsheet modeling. The authors provide practical case studies along with detailed instruction and illustration of the features of ModelRisk®, the most advanced risk modeling spreadsheet software currently available. If you intend to use spreadsheets for decision-supporting analysis, rather than merely as placeholders for numbers, then this is the resource for you.

 Mobile Media Oct 24 2021 The proliferation of mobile media in recent years is an international phenomenon, with

billions of devices sold annually. Mobile communications are now moving beyond individualized voice to mass media content--text, voice, sound, images, and even video. This will create new types of content that allow media companies and users to interact in new ways. There is a strong interest from the media and telecom industries in what manner of applications and content can be distributed in that fashion, and at what cost. To answer these questions, the book provides 18 chapters from internationally renowned authors. They identify likely types of content such as news, entertainment, peer-to-peer, and location-specific information; evaluate the economics, business models, and payment mechanisms necessary to support these media; and cover policy dimensions such as copyright, competitiveness, and access rights for content providers. This volume takes the reader through the various elements that need to be considered in the development of third generation (3G) content, and explains pitfalls and barriers. The result is a volume of interest to business professionals, academics, and policy makers. The book is international in focus and a glossary of terms is provided. There are few publications available which give an overview of this rapidly changing field.

 Consumer Behaviour at Amazon. A case study of mobile phones sold by Amazon UK Feb 02 2020 Research Paper (postgraduate) from the year 2012 in the subject Business economics - Operations Research, grade: B, The University of Liverpool, language: English, abstract: This paper investigates the influence of e-commerce and related factors on the consumer behaviour with respect to the purchase decisions of mobile phones. The different factors that influence the consumer behaviour related to buying mobile phones have been identified in this research. Electronic commerce or e-Commerce consists of the buying and selling of products and services over electronic systems such as the Internet and other computer networks. The amount of trade conducted electronically is remarkably increased with the widespread use of the Internet (Blackwell, 2006). To facilitate global trade various schemes for transaction of electronic money have been introduced. Such schemes offer concrete solutions to the risk associated with trust, information security, international finance, and other factors posing uncertainty. Trust is a major focus of e-commerce professionals. In traditional trade much of mechanisms for building trust are related to the form of communication between the participants and costs related to the contact in person. In case of remote access (in terms of the Internet, for example) many of the traditional mechanisms for establishing trust between participants exists. Therefore, options to enhance or introduce other new mechanisms are used for confidence building (Bodenhausen, 2012). There are different forms of e-commerce. The e-commerce models are:

 Adoption of LMS in Higher Educational Institutions of the Middle East Dec 14 2020 This book discusses the adoption of learning management systems (LMS) in higher education institutions. It presents influential predictors that may impact instructors' behavioral intention to adopt learning management systems in the context of Arab culture, as well as a unique model of technology acceptance that draws on and combines previous technology adoption models (i.e., a modified unified theory of acceptance and use of technology model – UTAUT2). Moreover, this study extends the UTAUT2 model by including Hofstede's (1980) cultural dimensions, and technology awareness as the moderators of the model. It also describes the explanatory technique approach used to collect quantitative data from the instructors at higher education institutions in Saudi Arabia and were analyzed with structural equation modeling using SPSS/Amos software. The findings revealed that facilitating conditions were the strongest predictor of behavioral intention to adopt an LMS, followed by performance expectancy and hedonic motivation, technology awareness, and cultural dimensions exerted a moderating influence on instructors' behavioral intention to use LMS in their teaching. By including new constructs, this becomes the first study of its kind exploring instructors' use of LMS in Higher Educational Institutions of Saudi Arabia and other countries of the Middle East. It offers practical insights for a broad range of researchers and professionals at higher education institutions and serves as a reference guide for designers of learning management systems (e.g., blackboard systems), policymakers, and the Ministry of Education staff.

 Energy Modelling and Fairness for Efficient Mobile Communication Dec 02 2019 Energy consumption and its management have been clearly identified as a challenge in computing and communication system design, where energy economy is obviously of paramount importance for battery powered devices. This thesis addresses the energy efficiency of mobile communication at the user end in the context of cellular networks. We argue that energy efficiency starts by energy awareness and propose EnergyBox, a parametrised tool that enables accurate and repeatable energy quantification at the user end using real data traffic traces as input. EnergyBox offers an abstraction of the underlying states for operation of the wireless interfaces and allows to estimate the energy consumption for different operator settings and device characteristics. The tool is used throughout the thesis to quantify and reveal inefficient data communication patterns of widely used mobile applications. We consider two different perspectives in the search of energy-efficient solutions. From the application perspective, we show that systematically quantifying the energy consumption of design choices (e.g., communication patterns, protocols, and data formats) contributes to a significantly smaller energy footprint. From the system perspective, we devise a cross-layer solution that schedules packet transmissions based on the knowledge of the network parameters that impact the energy consumption of the handset. These attempts show that application level decisions require a better understanding of possible energy apportionment policies at system level. Finally, we study the generic problem of determining the contribution of an entity (e.g., application) to the total energy consumption of a given system (e.g., mobile device). We compare the state-of-the-art policies in terms of fairness leveraging cooperative game theory and analyse their required information and computational complexity. We show that providing incentives to reduce the total energy consumption of the system (as part of fairness) is tightly coupled to the policy selection. Our study provides guidelines to select an appropriate policy depending on the characteristics of the system.

 Web Information Systems and Technologies Oct 12 2020 This book constitutes revised selected papers from the 14th International Conference on Web Information Systems and Technologies, WEBIST 2018, held in Seville, Spain, in September 2018. The purpose of the WEBIST series of conferences is to bring together researches, engineers and practitioners interested in technological advances and business applications of web-based information systems. The 12 full papers

presented in this volume were carefully reviewed and selected from originally 68 paper submissions. They cover different aspects of Web information systems, namely internet technology, mobile and NLP information systems, service-based information systems, platforms and eco-systems, Web intelligence and Web interfaces.

Refurbish Antique Telephones for Fun and Hobby Jan 15 2021 You dont need to know anything about electronics or telephones to refurbish your own non-working antique telephone. Simply follow the step-by-step procedures outlined in Refurbish Antique Telephones for Fun and Hobby to make your antique telephone look and work just as it did one hundred years ago. Turn a dust-laden oak wall phone into a beautiful piece of furniture that will serve as the focal point of an office, kitchen, or hallway. Transform a vintage Sultan phone from the 1920s into an instant conversation piece. No confusing circuit diagrams to follow. Just follow the steps given in words to wire the phone. There are loads of pictures to help walk you through the process of restoring your own small piece of history. There are even instructions on how to create a hidden touch-tone dial. All you need to get started are some basic tools and an old telephone. So hit those antique stores and flea markets with abandon, because Refurbish Antique Telephones for Fun and Hobby will help make your next telephone restoration project a success.

Virtual Learning Environments: Concepts, Methodologies, Tools and Applications Jun 19 2021 As the world rapidly moves online, sectors from management, industry, government, and education have broadly begun to virtualize the way people interact and learn. Virtual Learning Environments: Concepts, Methodologies, Tools and Applications is a three-volume compendium of the latest research, case studies, theories, and methodologies within the field of virtual learning environments. As networks get faster, cheaper, safer, and more reliable, their applications grow at a rate that makes it difficult for the typical practitioner to keep abreast. With a wide range of subjects, spanning from authors across the globe and with applications at different levels of education and higher learning, this reference guide serves academics and practitioners alike, indexed and categorized easily for study and application.

Business Process Modeling, Simulation and Design Oct 04 2022 Business Process Modeling, Simulation and Design, Third Edition provides students with a comprehensive coverage of a range of analytical tools used to model, analyze, understand, and ultimately design business processes. The new edition of this very successful textbook includes a wide range of approaches such as graphical flowcharting tools, cycle time and capacity analyses, queuing models, discrete-event simulation, simulation-optimization, and data mining for process analytics. While most textbooks on business process management either focus on the intricacies of computer simulation or managerial aspects of business processes, this textbook does both. It presents the tools to design business processes and management techniques on operating them efficiently. The book focuses on the use of discrete event simulation as the main tool for analyzing, modeling, and designing effective business processes. The integration of graphic user-friendly simulation software enables a systematic approach to create optimal designs.

Handbook of Research on Mobile Devices and Smart Gadgets in K-12 Education Oct 31 2019 The use of technology can significantly enhance educational environments for students. It is imperative to study new software, hardware, and gadgets for the improvement of teaching and learning practices. The Handbook of Research on Mobile Devices and Smart Gadgets in K-12 Education is a pivotal reference source featuring the latest scholarly research on the opportunities and challenges of using handheld technology devices in primary and secondary education. Including coverage on a wide variety of topics and perspectives such as blended learning, game-based curriculum, and software applications, this publication is ideally designed for educators, researchers, students, and technology experts seeking current research on new trends in the use of technology in education.

Social Psychology and Human Nature Apr 17 2021 You are a member of a social world on a planet that is home to about 8 billion people. This social world is filled with paradox, mystery, suspense and outright absurdity. Explore how social psychology can help you make sense of your own social world with this engaging and accessible book. Roy F. Baumeister and Brad J. Bushman's SOCIAL PSYCHOLOGY AND HUMAN NATURE, 5th Edition, can help you understand one of the most interesting topics of all -- the sometimes bizarre and baffling but always fascinating diversity of human behavior, and how and why people act the way they do. Thoroughly updated with the latest research, the new edition includes expanded coverage of social media use and loneliness, findings on mimicry, high divorce rates among attractive people, nonbinary gender theory, and prejudice and what may reduce it. After reading this book, you will have a much better understanding of people. Enabling Enterprise Transformation Jul 09 2020 Private enterprises in advanced economies have been learning to use information and communication technology (ICT) to innovate and transform their processes, products, services and business models, significantly improving productivity and competitiveness. Moreover, the ICT industry itself has become a major source of job creation and a contributor to economic growth and business transformation. A key question today is whether and how developing countries can learn to benefit from the ICT revolution, and what roles the government and private sector can play. Already, a number of developing countries have been inspired by the example of India and China, and are now seeking to jump on the outsourcing bandwagon. Nevertheless, with few exceptions in the developing world, little attention has been paid by policymakers and practitioners to invest systematically and proactively in ICT-enabled growth, poverty reduction and grassroots innovation. Most communities and small and medium-sized enterprises in developing countries, for example, face multiple constraints to adopting and leveraging this general purpose technology, and lack the capabilities for maximizing its potential. In "Enabling Enterprise Transformation", Nagy Hanna draws on his rich experience of over 35 years at the World Bank and other aid agencies as a development strategist and ICT policy expert, the most current research, and best practices from around the world to provide practical tools for promoting economic and social transformation through ICT. He assesses various initiatives to develop and diffuse ICT, such as innovation funds, incubators, parks, public-private partnerships, and comprehensive promotion programs. He argues for the strategic options now open for developing countries to participate in ICT production, to deploy ICT to transform industries and services, and to leverage ICT as a new national infrastructure for improving the business environment and enhancing the competitiveness of the whole economy. The challenge for leaders in developing countries is to create such social and institutional dynamics for learning about ICT use and adaptation at many levels. Lessons gained so far from

programs to build these social learning and innovation capabilities at the institutional and grassroots levels should be shared among developing countries, and a dialogue among business leaders, policymakers, development agencies, educational institutions, and the general citizenry must be advanced.

Building Product Models Aug 22 2021 Building Product Models thoroughly presents the concepts, technology, and methods now used to work out what will become the building product model – a new, digital representation for architecture, civil engineering, and building construction. Organized into three sections (history, current tools and concepts, and existing efforts and research issues), this resource provides the field of building product modeling with a standard reference as well as a single, comprehensive text for university courses. Until now, all the efforts in building modeling have been reported in research journals and conference proceedings or been made available as draft standards on the Internet. Building Product Models is the only book available on this vital field, bringing together essential aspects of major efforts from the early 1970s to the present.
