An Introduction to Biostatistics Jun 14 2021 Statistical analysis is increasingly being recognized as a fundamental quantitative skill for all biology students to master. This accessible text provides the necessary foundation for them to do just that. Glover and Mitchell emphasize the application of statistics using examples from many areas of the life sciences, but without sacrificing theoretical rigor. Along with standard parametric analyses, many examples of nonparametric analysis are incorporated to better simulate the situations that undergraduates encounter in their own research projects and to accommodate those readers with more modest backgrounds in mathematics. A large number of end-of-chapter problems provide ample opportunities to apply the concepts presented in the text.

Content and Complexity Jun 02 2020 Information design is an emerging area in technical communication, garnering increased attention in recent times as more information is presented through both old and new media. In this volume, editors Michael J. Albers and Beth Mazur bring together scholars and practitioners to explore the issues facing those in this exciting new field. Treating information as it applies to technical communication, with a special emphasis on computer-centric industries, this volume delves into the role of information design in assisting with concepts, such as usability, documenting procedures, and designing for users. Influential members in the technical communication field examine such issues as the application of information design in structuring technical material; innovative ways of integrating information design within development methodologies and social aspects of the workplace; and theoretical approaches that include a practical application of information design, emphasizing the intersection of information design theories and workplace reality. This collection approaches information design from the language-based technical communication side, emphasizing the role of content as it relates to complexity in information

design. As such, it treats as paramount the rhetorical and contextual strategies required for the effective design and transmission of information. Content and Complexity: Information Design in Technical Communication explores both theoretical perspectives, as well as the practicalities of information design in areas relevant to technical communicators. This integration of theoretical and applied components make it a practical resource for students, educators, academic researchers, and practitioners in the technical communication and information design fields.

Critical Pedagogy in the Twenty-First Century Nov 27 2019 This book simultaneously provides multiple analyses of critical pedagogy in the twenty-first century while showcasing the scholarship of this new generation of critical scholar-educators. Needless to say, the writers herein represent just a small subset of a much larger movement for critical transformation and a more humane, less Eurocentric, less paternalistic, less homophobic, less patriarchal, less exploitative, and less violent world. This volume highlights the finding that rigorous critical pedagogical approaches to education, while still marginalized in many contexts, are being used in increasingly more classrooms for the benefit of student learning, contributing, however indirectly, to the larger struggle against the barbarism of industrial, neoliberal, militarized destructiveness. The challenge for critical pedagogy in the twenty-first century, from this point of view, includes contributing to the manifestation of a truly global critical pedagogy that is epistemologically democratic and against human suffering and capitalist exploitation. These rigorous, democratic, critical standards for measuring the value of our scholarship, including this volume of essays, should be the same that we use to critique and transform the larger society in which we live and work.

Non-Discrimination in International Trade in Services Jun 26 2022 The principle of non-discrimination is fundamental to the regulation of international trade in goods and services. In the context of trade in goods, the concept of 'like products' has become a key element of the legal analysis of whether a trade obstacle violates GATT non-discrimination obligations. The equivalent concept of 'like services and service suppliers' in GATS rules on non-discrimination has received little attention in WTO jurisprudence. In light of the remaining uncertainties, Nicolas Diebold analyses the legal problems of the GATS 'like services and services suppliers' concept using a contextual and comparative methodology. The 'likeness' element is not analysed in isolation, but in context with 'less favourable treatment' and regulatory purpose as additional elements of non-discrimination. The book also explores how far theories from non-discrimination rules in GATT, NAFTA, BITs and EC as well as market definition theories from competition law may be applied to 'likeness' in GATS.
