characteristic length wikipedia Aug 20 2019 in physics a characteristic length is an important dimension that defines the scale of a physical
system often such a length is used as an input to a formula in order to predict some characteristics of the system and it is usually required by the
construction of a dimensionless quantity in the general framework of dimensional analysis and in particular applications such
isentropic process wikipedia Oct 22 2019 in thermodynamics an isentropic process is an idealized thermodynamic process that is both adiabatic
and reversible the work transfers of the system are frictionless and there is no net transfer of heat or matter such an idealized process is useful in

engineering as a model of and basis of comparison for real processes this process is idealized because reversible processes
