Substance Use and Abuse in South Africa Apr 06 2020 Substance abuse is an enormous social problem in South Africa, as elsewhere. But in South Africa in particular, tik (crystal meth, or methamphetamine) and alcohol are devastating society, aggravating poverty and crime, and contributing to child abuse and gender violence. Substance Use and Abuse in South Africa has arisen out of the thriving Brain-Behaviour Initiative (BBI) at the University of Cape Town, which relates neuroscience and behavioural science to social issues. This ground-breaking book looks at the problem of substance abuse from multiple perspectives and particularly in the light of recent discoveries in brain and behavioural science, but also takes a public health

view. Its focus ranges from brain imaging and dopaminergic neurocircuitry to policy and prevention, and is written by local researchers at the cutting edge.

Professional PHP5 Oct 05 2022 What is this book about? With the release of PHP 5 and the Zend Engine 2,

PHP finally graduates from it earliest days as a lightweight scripting syntax to an powerful object oriented programming language that can hold its own against the Java and .NET architectures that currently dominate corporate software development. This book has a pragmatic focus on how to use PHP in the larger scheme of enterprise-class software development. What does this book cover? Unlike Java or .NET, there is little discussion of the application of design patterns, component architectures, and best-practices to the development of applications using PHP. Software written in the absence of this sort of higher-order architecture will never be able to match the robust frameworks that Java and .NET ship with out of the box. This book addresses this issue by covering the following material: Part 1 discusses the OO concepts that were initially explored in Beginning PHP 5 and a demonstration of how to implement them in PHP 5. This section also covers UML modeling and provides a brief introduction to project management techniques that are covered in more depth in Part 4. Parts 2 and 3 present objects and object hierarchies that, when completed, comprise a robust toolkit that developers will be able to reuse on future projects. These chapters are designed to arm the professional PHP developer with the sort of constructs that are available out of the box with platforms such as Java and .NET — from simple utility classes like Collection and Iterator, to more complex constructs like Model/View/Controller architectures and state machines. Part 4 shows how to use the toolkit from Parts 2 and 3 to create real-world applications. We look at the development of a robust contact management system that will leverage the componentry and concepts already discussed and introduce project management and software architecture concepts that enable developers to accurately identify business requirements, design scalable, extensible platforms, and handle change management effectively. It covers the waterfall and spiral project management paradigms and include a discussion on eXtreme Programming and other approaches to software development. The Appendices include an extended discussion on the effective use of CVS, introduce the Zend Studio IDE and related tools, and discuss performance tuning and scalability. **MIS Techniques in Orthopedics** Apr 30 2022 Sole reference in the field of orthopedic surgery

Contingent Lives Jan 16 2021 Most women in the West use contraceptives in order to avoid having children. But in rural Gambia and other parts of sub-Saharan Africa, many women use contraceptives for the opposite reason—to have as many children as possible. Using ethnographic and demographic data from a three-year study in rural Gambia, Contingent Lives explains this seemingly counterintuitive fact by juxtaposing two very different understandings of the life course: one is a linear, Western model that equates aging and the ability to reproduce with the passage of time, the other a Gambian model that views aging as contingent on the cumulative physical, social, and spiritual hardships of personal history, especially obstetric trauma. Viewing each of these two models from the perspective of the other, Caroline Bledsoe produces fresh understandings of the classical anthropological subjects of reproduction, time, and aging as culturally shaped within women's conjugal lives. Her insights will be welcomed by scholars of anthropology and demography as well as by those working in public health, development studies, gerontology, and the history of medicine.

The Essential Turing Sep 23 2021 Alan Turing, pioneer of computing and WWII codebreaker, is one of the most important and influential thinkers of the twentieth century. In this volume for the first time his key writings are made available to a broad, non-specialist readership. They make fascinating reading both in their own right and for their historic significance: contemporary computational theory, cognitive science, artificial intelligence, and artificial life all spring from this ground-breaking work, which is also rich in philosophical and logical insight. An introduction by leading Turing expert Jack Copeland provides the background and guides the reader through the selection. About Alan Turing Alan Turing FRS OBE, (1912-1954) studied mathematics at King's College, Cambridge. He was elected a Fellow of King's in March 1935, at the age of only 22. In the same year he invented the abstract computing machines - now known simply as Turing

machines - on which all subsequent stored-program digital computers are modelled. During 1936-1938 Turing continued his studies, now at Princeton University. He completed a PhD in mathematical logic, analysing the notion of 'intuition' in mathematics and introducing the idea of oracular computation, now fundamental in mathematical recursion theory. An 'oracle' is an abstract device able to solve mathematical problems too difficult for the universal Turing machine. In the summer of 1938 Turing returned to his Fellowship at King's. When WWII started in 1939 he joined the wartime headquarters of the Government Code and Cypher School (GC&CS) at Bletchley Park, Buckinghamshire. Building on earlier work by Polish cryptanalysts, Turing contributed crucially to the design of electro-mechanical machines ('bombes') used to decipher Enigma, the code by means of which the German armed forces sought to protect their radio communications. Turing's work on the version of Enigma used by the German navy was vital to the battle for supremacy in the North Atlantic. He also contributed to the attack on the cyphers known as 'Fish'. Based on binary teleprinter code, Fish was used during the latter part of the war in preference to morse-based Enigma for the encryption of high-level signals, for example messages from Hitler and other members of the German High Command. It is estimated that the work of GC&CS shortened the war in Europe by at least two years. Turing received the Order of the British Empire for the part he played. In 1945, the war over, Turing was recruited to the National Physical Laboratory (NPL) in London, his brief to design and develop an electronic computer - a concrete form of the universal Turing machine. Turing's report setting out his design for the Automatic Computing Engine (ACE) was the first relatively complete specification of an electronic stored-program general-purpose digital computer. Delays beyond Turing's control resulted in NPL's losing the race to build the world's first working electronic stored-program digital computer - an honour that went to the Royal Society Computing Machine Laboratory at Manchester University, in June 1948. Discouraged by the delays at NPL, Turing took up the Deputy Directorship of the Royal Society Computing Machine Laboratory in that year. Turing was a founding father of modern cognitive science and a leading early exponent of the

hypothesis that the human brain is in large part a digital computing machine, theorising that the cortex at birth is an 'unorganised machine' which through 'training' becomes organised 'into a universal machine or something like it'. He also pioneered Artificial Intelligence. Turing spent the rest of his short career at Manchester University, being appointed to a specially created Readership in the Theory of Computing in May 1953. He was elected a Fellow of the Royal Society of London in March 1951 (a high honour).

The Palgrave Handbook of Co-Production of Public Services and Outcomes Jul 10 2020 This Handbook provides a comprehensive and authoritative account of the movement towards co-production of public services and outcomes, a topic which has recently become one of the most intensely debated in public management and administration, both in practice and in the academic literature. It explores in depth the processes of co-commissioning, co-design, co-delivery and co-assessment as major approaches to co-production through citizen voice and citizen action and as key mechanisms in the co-creation of public value. The key debates in the field are fully explored in chapters from over 50 eminent authors in the field, who examine the roots of co-production in the social sciences, the growth of co-production in policy and practice, its implementation and management in the public domain, and its governance, including its negative aspects (the 'dark side' of co-production). A final section discusses different aspects of the future research agenda for co-production.
