How to Raise a Drug-Free Kid Jan 05 2021 The highly acclaimed comprehensive guide to getting your child through the formative pre-teen, teen, and college years drug-free—now completely revised and updated. Nearly every child will be offered drugs or alcohol before graduating high school, and excessive drinking is common at most colleges. But the good news is that a child who gets to age twenty-one without smoking, using illegal drugs, or abusing alcohol or prescription drugs is virtually certain never to do so. Drawing on more than two decades of research at The National Center on Addiction and Substance Abuse at Columbia University (CASAColumbia), founder Joseph A. Califano, Jr., presents a clear, common-sense guide to helping kids stay drug-free. All parents dream of a healthy, productive, and fulfilling future for their children; Califano shows which specific actions work and what parents can do to teach, protect, and empower their children to have the greatest chance of making that future come true. Teenagers who learn

about the risks of drugs from their parents are twice as likely never to try them, and this book provides the tools parents need to prepare their children for those crucial decision-making moments. In this revised and updated edition, Califano tackles some of the newest obstacles standing between our kids and a drug-free life—from social media sites and cell phone apps to the explosion in prescription and over-the-counter drug abuse and the increased dangers and addictive power of marijuana. He reveals what teens can't or won't tell their parents about their thoughts on drugs and alcohol, and combines the latest research with his discussions with thousands of parents and teens about the challenges that widespread access to drugs and alcohol present, and how parents can instill in their teens the will and skills to choose not to use. [Principles of Adolescent Substance Use Disorder Treatment](#) Dec 04 2020 "Principles of Adolescent Substance Use Disorder Treatment" focuses on the unique realities of adolescent substance use-which includes abuse of illicit and prescription drugs, alcohol, and tobacco-and the special treatment needs for people aged 12 to 17. The adolescent years are a key window for both substance use and the development of substance use disorders. Brain systems governing emotion and reward-seeking are fully developed by this time, but circuits governing judgment and self-inhibition are still maturing, causing teenagers to act on impulse, seek

new sensations, and be easily swayed by their peers-all of which may draw them to take risks such as trying drugs of abuse. What is more, because critical neural circuits are still actively forming, teens' brains are particularly susceptible to being modified by those substances in a lasting way-making the development of a substance use disorder much more likely. In addition, abusing drugs during adolescence can interfere with meeting crucial social and developmental milestones and also compromise cognitive development. Historically the focus with adolescents has tended to be on steering young people clear of drugs before problems arise. But the reality is that different interventions are needed for adolescents at different places along the substance use spectrum, and some require treatment, not just prevention. Scientific research has now established the efficacy of a number of treatment approaches that can address substance use during the teen years. This guide describes those approaches, as well as presents a set of guiding principles and frequently asked questions about substance abuse and treatment in this age group.

The Oxford Handbook of Adolescent Substance Abuse Oct 02 2020 Adolescent substance abuse is the nation's #1 public health problem. It originates out of a developmental era where experimentation with the world is increasingly taking place, and where major changes in physical self and social relationships are taking place. These changes cannot be understood by any one discipline nor can they be described by focusing

only on the behavioral and social problems of this age period, the characteristics of normal development, or the pharmacology and addictive potential of specific drugs. They require knowledge of the brain's systems of reward and control, genetics, psychopharmacology, personality, child development, psychopathology, family dynamics, peer group relationships, culture, social policy, and more. Drawing on the expertise of the leading researchers in this field, this Handbook provides the most comprehensive summarization of current knowledge about adolescent substance abuse. The Handbook is organized into eight sections covering the literature on the developmental context of this life period, the epidemiology of adolescent use and abuse, similarities and differences in use, addictive potential, and consequences of use for different drugs; etiology and course as characterized at different levels of mechanistic analysis ranging from the genetic and neural to the behavioural and social. Two sections cover the clinical ramifications of abuse, and prevention and intervention strategies to most effectively deal with these problems. The Handbook's last section addresses the role of social policy in framing the problem, in addressing it, and explores its potential role in alleviating it.

Only You Can Save Your Kids Jul 11 2021 Dr. Reznicek is a clinical psychiatrist who offers radical advice for parents who want to keep their teens away from drugs: take complete control of your child's life. He says parents have all the tools they need to keep kids drug-free: clear expectations, close supervision, home drug-testing and swift consequences for drug use. He is a harsh critic of the disease model of substance abuse and drug rehab, which he says enables drug use. Rehab teaches teens that drug abuse is a brain disease and that quitting is so complicated it requires trained experts. Neither is true. The disease model also makes parents think they are inadequate for the job. This is an iconoclastic, thought-provoking 9600-word essay that will unsettle anyone who thinks the medical profession holds the keys to solving the drug problem. It is full of common sense and hope-it shows that real help for teens is much closer to home, and much less complicated than many think.
