UCL Hospitals Injectable Medicines Administration Guide 17 2021 "I would definitely recommend this book to all staff with an interest and involvement in intravenous drug therapy." —The Pharmaceutical Journal "There is no doubt that nurses will find this small book useful. It should be available for consultation in any clinical area where drugs are administered to patients by the injectable routes." —Journal of Clinical Nursing The safe administration of injectable medicines is key to patient safety. The NPSA recognises the use of injectable medicines is a high risk activity and recommends written information about injectables to be available at the point of preparation. The UCL Hospitals Injectable Medicines Administration Guide is a practical, accessible guide covering many important aspects of administering medicines by injection. It provides clear, concise information on the preparation and administration of over 245 injectable medicines for adults, paediatrics and neonates. It is an essential resource for nurses and other healthcare professionals: it provides the key information and advice needed for the safe and effective administration of injectable medicines. The Guide's introductory section provides a concise yet comprehensive overview of injectable therapy, including the risks and benefits of IV administration, infusion devices, and pharmaceutical aspects of injectable therapy. For each drug the alphabetically tabulated monographs provide: A practical method of preparation and administration via the IV, IM and SC routes, with risk reduction in mind at every step Expert advice from the team of specialist pharmacists at UCLH to ensure safe and pragmatic use of each medicine Monitoring advice for the management of reactions that may occur during administration Y-site and syringe driver compatibility data Minimum infusion volume data for fluid restricted patients Extravasation warnings, pH, sodium content, displacement values, stability and flush data New to this edition: 40 new monographs including recently marketed, unlicensed, rarely used and specialist medicines Detailed advice for the administration of high risk medicines such as heparin, with access to UCLH's medicine related guidelines at www.wiley.com/go/UCLH colour-coded NPSA risk assessment for every mode of administration for every medicine, to highlight the safest method of administration A user guide and tutorial to give new readers confidence in using and understanding the Guide Revised chapters on administration methods and devices, aseptic non-touch technique, and latex allergy Fully revised and expanded Y-site compatibility section Spiral binding to allow the book to be left open at the relevant page The Guide is also available electronically at www.uclhguide.com.

A Handbook of Applied Biopolymer Technology 07 2020 Scientists are conducting active research in different fields of engineering, science and technology by adopting the Green Chemistry Principles and methodologies to devise new processes, with a view to help protect and ultimately save the environment from further anthropogenic interruptions and damage. With this in mind, the book provides an up-to-date, coherently written and objectively presented set of chapters from eminent international researchers who are actively involved in academic and technological research in the synthesis, (bio)degradation, testing and applications of biodegradable polymers and biopolymers. This pool of the latest ideas, recent research and technological progress, together with a high level of thinking with a comprehensive perspective, makes the emerging field of biodegradable polymer science and engineering (or bio-based polymers) linked to environmental sustainability, the essence of this key publication. The handbook consists of chapters written and contributed by international experts from academia who are world leaders in research and technology in sustainability and biopolymer and biodegradable polymer synthesis, characterisation, testing and use. The book highlights the following areas: green polymers; biopolymers and bionanocomposites; biodegradable and injectable polymers; biodegradable polyesters; synthesis and physical properties; discovery and characterization of biopolymers; degradable bioelastomers, lactic acid based biodegradable polymers; enzymatic degradation of biodegradable polymers; biodegradation of polymers in the composting environment; recent development in biodegradable polymers; research and applications and biodegradable foams. The book is aimed at technical, research-orientated and marketing people in industry, universities and institutions. It will also be of value to the worldwide public interested in sustainability issues and biopolymer development as well as others interested in the practical means that are being used to reduce the environmental impacts of chemical processes and products, to further eco-efficiency, and to advance the utilization of renewable resources for a based production and supplier chain. Readers will gain a comprehensive and consolidated overview of the immense potential and ongoing research in bio-based and biodegradable polymer science, engineering and technology to make the world greener.
